**CLAIMS**

1. A vehicle suspension seat arrangement, comprising a seat frame, including a seat base and a seat back, and a support member arranged to be mounted relative to a vehicle proximate the seat back, the seat frame being suspended on and movable relative to the support member and a link means connected between the support member and the seat back, and being arranged to prevent motion of the seat back beyond a predetermined position.  
5
2. A vehicle seat arrangement in accordance with claim 1, wherein the link means is a mechanical scissor link.
- 15 3. A vehicle seat arrangement in accordance with claim 1, wherein the link means includes a recliner mechanism.
4. A vehicle seat arrangement in accordance with claim 1, 2 or 3, the link means being strong enough to resist motion of the seat frame relative to the support member beyond a predetermined position when a load is applied to the seat back such as may be applied by a seat belt mounting of the seat back in a vehicle accident.  
20
- 25 5. A vehicle seat arrangement in accordance with any one of the preceding claims, including an integral seat belt.
6. A vehicle seat arrangement in accordance with any one of the preceding claims, wherein the link means is positioned remote from a pivot connection between the seat back and the seat base.
